INDIVIDUAL DESIGN ELEMENTS

## IPAS Design · Tableaus

In einer Welt voller Veränderungen bildet unser Heim den Rückzugsort, an dem wir uns erholen und an dem wir einen großen Teil unserer Zeit verbringen.

Stetig steigen die Funktionalität und der Grad der Automatisierung in modernen Gebäuden. Schon lange ist der einfache Ein/Aus-Schalter an der Tür nicht mehr ausreichend, um eine Bedienung der unterschiedlichen Funktionen zu ermöglichen. Die intuitive Bedienung der notwendigen Raumfunktionen ist eine der anspruchsvollsten Aufgaben, die die moderne Gebäudetechnik lösen muss.

IPAS bietet deshalb ihren Kunden ganzheitliche Gebäudelösungen an. IPAS Smart Building Konzepte sind auf die funktionalen Anforderungen und auf die intuitive Bedienung der geforderten Funktionalitäten abgestimmt. Ein elementarer Baustein in diesen Konzepten sind unsere individuellen Bedientableaus. Sie lassen sich stets in das Gesamtbild eines Raumes integrieren und bereichern so die Komposition aus Form, Material und Farbe. Diese Elemente, vollendet arrangiert in einem individuellen Design sind Garant für eine intuitive Bedienung, die sich auf das Wesentliche konzentriert.

IPAS Bedientableaus vereinen Funktionalität mit Form und erheben den Schalter zum edlen Raumaccessoire. Unsere Tableau-Serien Largo, Barchetto, Contratempo, Trico und Piazza bilden die Basis, die geforderte Funktionalität abzubilden. Exklusive Design- und Materialvarianten in Standard- und individualisierbaren Maßen sowie Wunschbeschriftung ermöglichen passgenaue Lösungen für Ihre Ansprüche.

Verarbeitete Materialien sind Edelstahl, Aluminium und Kunststoff. Ein breiter Fächer an Aluminiumfarben, RAL Farben und Effektfarben vollendet die Form. Edelstahl präsentiert sich individuell gebürstet oder glasperlgestrahlt in seiner Vollendung.

Wahrnehmung und Kommunikation finden heutzutage zunehmend über Zeichen und Sinnbilder statt. IPAS hat eine Vielzahl von Funktionen in aussagekräftigen Symbolen umgesetzt.

Ist das Symbol nicht eindeutig, bringen wir das klare Wort auf unsere Bedienoberfläche. Unsere Bedientableaus werden graviert oder elektrochemisch signiert. So bearbeitet garantieren wir dauerhaft eine gleichbleibende Qualität der Beschriftung.

## IPAS Design Panels

In an ever-changing world, our home, where we spend a large proportion of our time, should be a retreat where we are able to relax. In modern buildings, the requirements for functionality and automation are continuously on the rise. The simple on/ off switch at the door has long ceased to be sufficient to meet these challenges. In fact, intuitive control of room functionality is one of the most challenging tasks modern building technology has to solve.

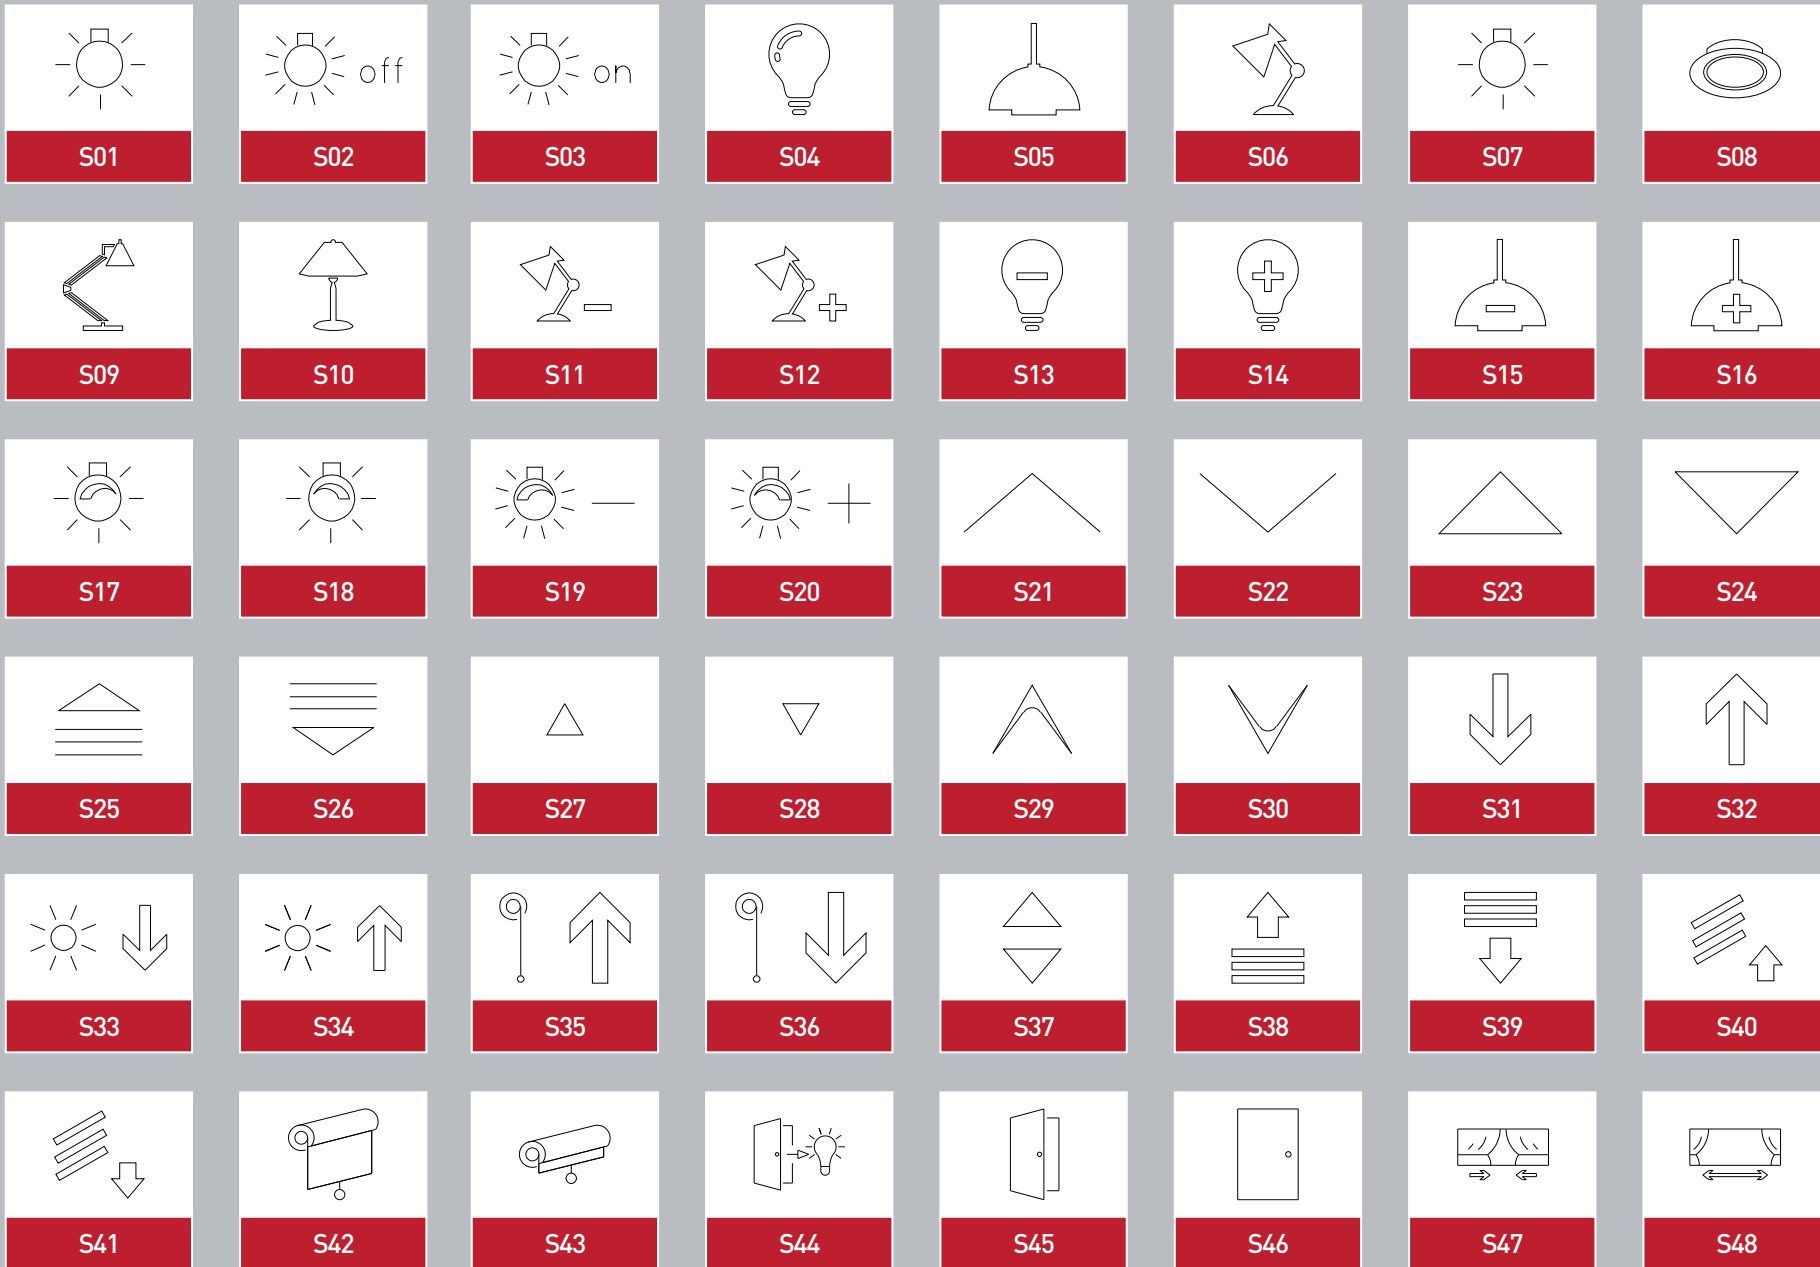

IPAS therefore offers its customers holistic building solutions. IPAS Smart Building concepts have been developed to not only meet all the functional requirements, but also to enable intuitive control of these functions. A fundamental element of every concept are our individualised control panels that can be easily integrated into the overall appearance of a room, even enriching its composition in terms of colour, form and material. These elements, perfectly arranged in a customised design are a guarantee for intuitive control that focuses on the essential.

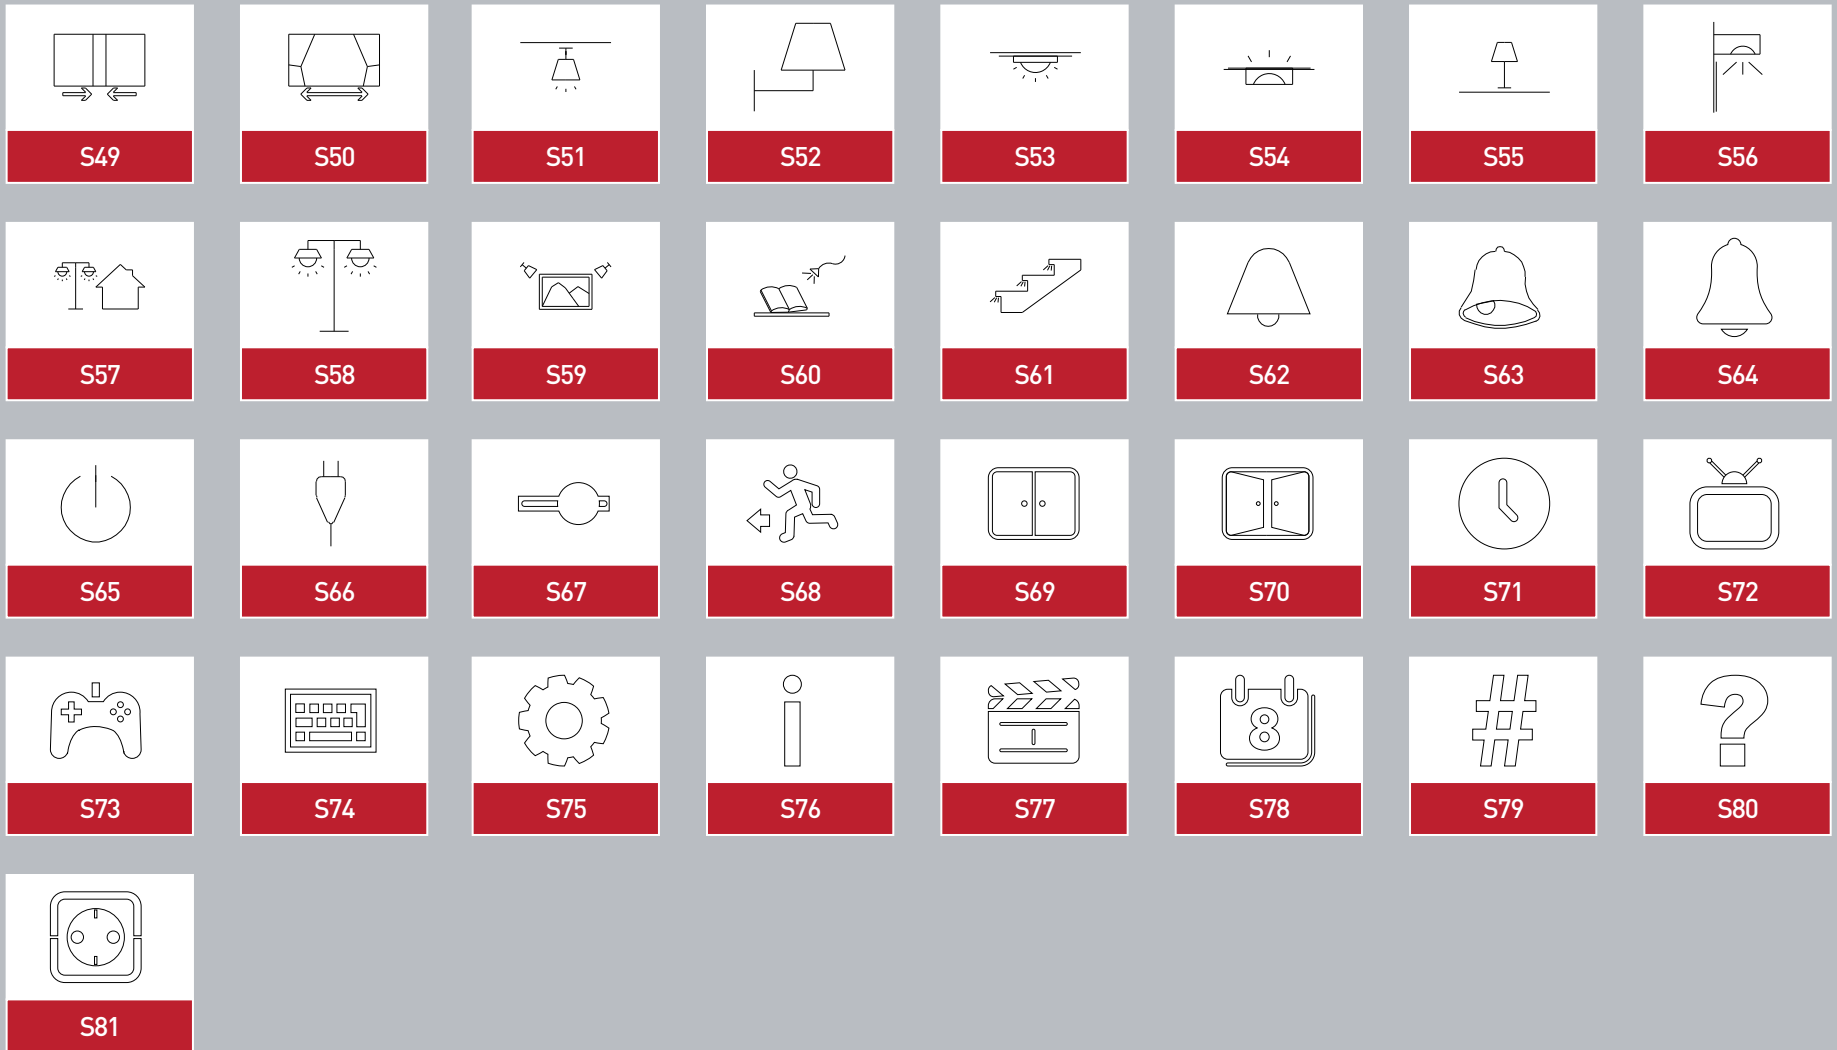

IPAS control panels combine functionality with form and transform a simple switch into an elegant room accessory. Optimal functionality is provided through our different panel ranges: Largo, Barchetto, Contratempo, Trico and Piazza. These exclusive designs and materials, available in both standard and individually customised dimensions, as well as personal engravings ensure that we always have the perfect solution for your needs.

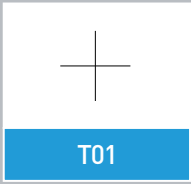

The materials we use are stainless steel, aluminium and plastic. A wide range of aluminium colours, RAL colours and effect colours are available. Stainless steel can be brushed or glass bead blasted.

Increasingly perception and communication are facilitated through symbols and images. IPAS has therefore assigned meaningful and elegant symbols to many functions.

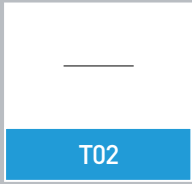

However, if the symbol is not clear or undesirable, the actual word can be integrated into the control panel surface. All our panels are engraved or electrochemically signed, guaranteeing long-lasting visibility.
